EDUCATION

Rajiv Gandhi Institute of Petroleum Technology

2024 – 2029

Integrated Dual Degree in Computer Science and Artificial Intelligence - **7.45/10**

Jais, Rae Bareilly, India

Seth M.R. Jaipuria School

2023

Intermediate **Percentage - 84.2%**

Lucknow, India

Gurukulam Academy

2021

Secondary **Percentage - 92.8%**

Champawat, India

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, Python

Frontend: Html, CSS, React.js, Next.js, Tailwind CSS, ShadcnUI

Backend: Node.js Express.js, FastAPI, RESTful API

Databases and ORM: MongoDB, PostgreSQL, Prisma ORM

Authentication And Services: Clerk, NextAuth.js, Firebase, Resend

AI And Computer Vision: Generative AI Integration (API Based), Python Based AI Services, MediaPipe Vision, Face-api.js

Tools and Practices: Git, GitHub, Postman, Vercel, Render, UptimeRobot

PROJECTS

SaundaryaAI—AI Powered Skincare Application [↗](#)

March 2026

Tech: Next.js, React.js, FastAPI, GenAI APIs, NextAuth.js, Aceternity UI, Prisma, PostgreSQL, Vercel, Render, UptimeRobot

- Developed a **full-stack** skincare platform with **Next.js** handling frontend and **FastAPI** serving AI backend workflows.
- Built AI-powered features using **GenAI APIs** to generate **personalized skincare routines** based on user skin profiles.
- Deployed frontend on **Vercel** and AI backend on **Render**, with **UptimeRobot** monitoring for 24/7 uptime tracking.
- Designed secure authentication and session handling using **NextAuth.js**.
- Designed a responsive UI handling multiple skin profile inputs and rendering dynamic **AI-generated routine** per user
- Exposed and consumed scalable **REST APIs** between Next.js and FastAPI microservices.
- Github

PitchPerfectAI—AI Powered Speech Generation & Presentation Coach [↗](#) March 2026

Tech Stack: React.js, Face-API.js, MediaPipe Vision, TailwindCSS, Clerk Auth, Axios, Groq API

- Engineered an **AI-driven speech generation system** that converts user-provided presentation topics into structured speech scripts using LLM APIs.
- Integrated **computer vision pipelines** using **Face-API.js** and **MediaPipe Vision** to track facial expressions, eye gaze, and upper-body posture during presentations.
- Implemented **speech pattern analysis** including filler word detection and speaking rhythm evaluation to assess clarity and confidence.
- Built a **real-time behavioral signal capture pipeline** to process posture, gesture, and facial metrics from webcam input.
- Aggregated multimodal presentation signals and used **Groq API** to generate a comprehensive **AI-evaluated performance report**.
- Developed a responsive frontend using **React.js** and **TailwindCSS** with secure authentication via **Clerk**.
- Github
